This article has been corrected: The legends for figures 1 and 2 were accidentally switched. The corrected figure legends are given below:

Figure 1: Expression of *MYC* in myeloma cell lines correlated positively with sensitivity to *MYC* inhibition. The IC50-values of the *MYC* inhibitor 10058-F4 calculated from the results shown in Supplementary Figure 2 was compared with **A.** *MYC* mRNA values or **B.** *MYC*/GAPDH relative protein levels. The slope and R²-values are shown in the plots.

Figure 2: *MYC* gene copy numbers determine expression of *MYC* mRNA and protein in myeloma cell lines. In a panel of myeloma cell lines the levels of *MYC* gene copy numbers as measured by PCR was related to **A.** *MYC* mRNA measured using nCounter, and **B.** *MYC* protein levels measured using immunoblotting and normalized to GAPDH. The slope and R²-values are shown in the plots.
